DETAILED ACTION

Allowable Subject Matter

1. Claims 1 – 4, 6, 8 – 23, and 25 - 29 allowed.
2. The following is an examiner's statement of reasons for allowance: **Regarding claim 1**, the prior art does not disclose or suggest the combination of wherein a portable computing device, comprising: a component that receives an electro-magnetic flux generated from an external source; and a charging component that generates a charging current from the flux, and charges a rechargeable power supply; and a controller that determines a first charging time for the portable computing device and allocates a second charging time to the portable computing device.
3. **Regarding claims 2 - 4, 6, and 8**, claims are dependent upon claim 1.
4. **Regarding claim 9**, the prior art does not disclose or suggest the combination of wherein a method of charging a portable unit comprising: allocating a charge time to charge a rechargeable power supply of the portable unit; providing at least one primary induction assembly with a primary winding configured to create a magnetic flux; providing a second pick up induction assembly coupled to the rechargeable power supply of the portable unit; unit, the magnetic flux extendable in to the second pick up induction assembly; and opportunistically recharging the power supply based at least in part on the charge time via a current created in the second induction assembly from the magnetic flux.
5. **Regarding claims 10 – 18**, the claims are dependent upon claim 9.

6. **Regarding claim 19**, the prior art does not disclose or suggest the combination of wherein a charging system for a portable unit comprising: a controller that determines a charging time for a rechargeable power source of portable unit and allocates a partial charge time to the rechargeable power source; a primary induction assembly with a primary coil coupled to a primary power source; and a secondary induction assembly with a secondary coil coupled to a recharge, able power source of the portable unit; the magnetic flux of the first primary induction assembly extendable to the secondary induction assembly so as to provide the rechargeable power source a charging current that is inductively created via the magnetic flux during an opportunistic charging of the portable unit.

7. **Regarding claims 20 – 23, and 25 - 28**, the claims are dependent upon claim 19.

8. **Regarding claim 29**, the prior art does not disclose or suggest the combination of wherein a charger system comprising: means for allocating disparate charge times to at least two portable units; means for creating a magnetic flux; and means for receiving a magnetic flux the receiving means operatively connected to a rechargeable power source of each of the at least two portable unit units so as to create an electric current during an opportunistic charge of the at least two portable unit units.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
